

If Your WAN Fails, Lives Are at Risk

You have satellite offices with a patchwork of technologies that are not in sync; bandwidth needs that are exploding as more medical devices are connected; and security and compliance concerns that continue to increase. You need a more agile, robust, reliable, and trusted network infrastructure to service both patients and medical staff well.

SD-WAN from Omega Can Help

It will allow you to **centrally monitor and manage all** your network connections and applications in real time

It will allow you to **prioritize traffic and applications** so that an alert from a heart-monitoring device is given priority over routine administrative email.

It will allow you to **set rigorous security policies** so your remote sites have the same protections as the central hospital or clinic.

Why SD-WAN from Omega?

We were early to the SD-WAN marketplace and have experience in installing and managing SD-WAN networks for the healthcare industry.

We are **vendor and carrier agnostic** and can provide you with a co-managed SD-WAN service that gives you the flexibility to self-manage your application and security

policies, while we manage the overall connectivity, customer experience, and network SLAs.
