Survey Says: Security, In-House Expertise Are Your Key SD-WAN Concerns

Do you think the adoption of software-defined wide area network (SD-WAN) is a way to improve security?

According to a recent survey, 85% of companies do.

Is a lack of understanding concerning SD-WAN technology a barrier to your organization implementing SD-WAN?

You're not alone.

That same survey said that 60% of companies feel the same way. And 58% say they do not have enough people qualified to implement the technology.

For Your Security Concerns

We'd suggest looking at Versa Networks. We're a reseller for Versa, the company that sponsored [the survey](#) and a leading SD-WAN provider. Although we are usually vendor agnostic, if security is your top concern, we'd recommend Versa.

Versa's approach to SD-WAN and integrated SD-Security is unique – it's fully software-based, integrates a deep set of layered security, and is 100% multi-tenant to enable full segmentation of your network. You can find out more about Versa's SD-WAN, SD-Security and SD-Branch solution [here](#).

For Your Implementation Concerns

You don't need to look any further than **yours truly**. We were early to the SD-WAN marketplace and have installed and managed endpoints for clients in the healthcare, insurance, and hospitality industries.

OMEGA TELESERVE, LLC

In 2016 we became the first reseller in the southwest for VeloCloud. We have since expanded our portfolio of SD-WAN vendors to include Versa and CloudGenix.

We can provide you with a co-managed SD-WAN service that gives you the flexibility to self-manage your application and security policies, while we manage the overall connectivity, customer experience and network SLAs.

We're easy to work with and we'd like to help.
